

## **No to House Bills 3557, 3565, 3309, 3293 , 3299 , 3283 , 3343, The FASTER Act in the Senate, BIG WIRES Act in both houses, and AVs**

Two grid bills have been introduced: one in May (which may have passed), and the other this week. This latest bill -- the FASTER Act -- aims to "streamline" permitting processes. **The public is usually seen as one of the "key obstacles".**

**Here are the press releases:**

- <https://scottpeters.house.gov/2023/5/peters-hickenlooper-big-wires-act-would-speed-permitting-reform-simplify-grid-upgrades> Peters-Hickenlooper BIG WIRES Act Would Speed Permitting Reform, Simplify Grid Upgrades, May 26, 2023
- <https://scottpeters.house.gov/2023/7/rep-peters-veasey-c-rdenas-introduce-transmission-permitting-reform-legislation>

Reps. Peters, Veasey, Cárdenas Introduce Transmission Permitting Reform Legislation, July 17, 2023 WASHINGTON - Today, Representatives Scott Peters (D-CA-50), Marc Veasey (D-TX-33), and Tony Cárdenas (D-CA-29) introduced the House companion of the Facilitating America's Siting of Transmission and Electric Reliability (FASTER) Act. **The FASTER Act** addresses key obstacles slowing down the siting, planning, and permitting process. Senator Martin Heinrich (D-NM) introduced the bill in the Senate last month...

**HR 3557:** This bill would massively expand federal authority in Washington DC while removing states' rights and local control. It will create near-total elimination of local zoning authority.

**HR 3565:** authorizes the FCC to resume wireless spectrum auctions; paves the way to make additional spectrum available in 2025 (around 4.5 GHz and 8 GHz); creates a slower federal definition of broadband of 100 Mb downstream/20 Mb upstream (see section 901). The bill would allow broadband funding to be used for slower networks, overriding the existing regulation that defines broadband as a faster 100 Mb downstream and 100 Mb upstream. Fiberoptic networks easily meet the faster standard. The slower standard would make it easier for federal broadband grants to be used for wireless networks (instead of fiber). E&C Committee approved 50-0.

**HR 3309:** Establishes uniform fees for wireless applications on government land and buildings. E&C Committee approved 50-0.

**HR 3293:** Establish a "strikeforce" to ensure that communications facilities authorizations are expedited on federal land and in national forests, for wireline and wireless (both licensed and unlicensed). E&C Committee approved 51-0.

**HR 3299:** Requires the Department of Interior and the Department of Agriculture to establish online portals to accept, process, and dispose of certain forms to deploy facilities on federal property. E&C Committee approved 51-0.

**HR 3283:** requires Department of Commerce to report to Congress on the barriers to processing online forms for deployment on federal property. E&C Committee approved 51-0.

**HR 3343:** requires Department of Commerce to create a plan for accepting, processing, and disposing of certain forms. E&C Committee approved 51-0

The bills are going to these committees, so find your Rep. and then go to their website and write or call:  
<https://transportation.house.gov/about/membership.htm>  
<https://naturalresources.house.gov/about/members.htm>

**However, they will be going to all members, so please WRITE ALL CONGRESS MEMBERS.**

(Most people have 2 Senators and 1 Representative), and tell them “no” to the above bills, and why. No more wireless, no 5G. No “broadband,” which is for feeding AI, and the biometric surveillance state. We do not want to become the surveillance State. Let's find another way. [stop-ai.pdf](#)

You can also ask your local officials and ask them to contact Congressional delegates to tell them not to take away their power.

### **Some talking points:**

If wireless can see through walls, it can see through clothes. What about the children, the **fourth** amendment?!
